Professional Summary

Junior DevOps Engineer with hands-on experience in cloud infrastructure, CI/CD automation, containerization, and Infrastructure as Code. Skilled in designing and deploying scalable solutions using Azure, Terraform, Docker, Jenkins, and Linux. Experienced in building deployment pipelines, managing cloud-hosted applications, troubleshooting infrastructure issues, and supporting high-availability environments. Strong understanding of DevOps practices, automation, networking fundamentals, and system reliability.

Tech Stack

Azure | Docker | Kubernetes | Jenkins | GitHub Actions | Azure DevOps | Terraform | Ansible | Git | Linux | Bash | Python | Prometheus | Grafana

Internship Experience

Infrastructure & Security Engineer Trainee,

02/2026 – 05/2026

ATAS (Alpha Tech Academy)

- Gained hands-on experience in Linux administration, networking, cloud infrastructure, and DevOps operations.
- Worked with infrastructure provisioning, deployment workflows, and system troubleshooting activities.
- Implemented automation concepts using scripting and Infrastructure as Code practices.
- Participated in monitoring, security hardening, and operational support tasks.
- Collaborated with teams on infrastructure implementation and deployment projects.
- Developed understanding of scalable architecture, high availability, and cloud infrastructure design.

Azure Cloud & DevOps Intern,

02/2025 – 02/2026

Intellipaat in association with IIT Roorkee

- Designed and implemented a multi-region web hosting solution on Microsoft Azure using Traffic Manager and Application Gateway.
- Built highly available cloud infrastructure supporting failover and traffic distribution across regions.
- Worked with Docker-based deployment workflows and CI/CD implementation concepts.
- Managed Linux-based environments and performed deployment troubleshooting.
- Assisted in monitoring infrastructure performance and resolving operational issues.
- Collaborated with teams to improve deployment workflows and release processes.
- Applied infrastructure automation concepts and cloud architecture best practices.

Skills

Cloud Platforms: Microsoft Azure

CI/CD & DevOps: Jenkins, GitHub Actions, Azure DevOps, Git

Containerization & Orchestration: Docker, Kubernetes

Infrastructure as Code: Terraform, Ansible

Monitoring & Observability: Prometheus, Grafana

Operating Systems: Linux

Scripting & Automation: Bash, Python

Networking: DNS, TCP/IP, VPC Concepts, Load Balancing, Application Gateway

DevOps Practices: CI/CD, Infrastructure Automation, Release Management, High Availability, Troubleshooting

Certificates

Advanced Certification in Cloud Azure and DevOps (iHUB DivyaSampark, IIT Roorkee & Intellipaat | 2026)

Linux System Administration (Udemy)

Cloud Application Developer Internship (Rooman Technologies, IBM & NASSCOM | 2025)

Jeevan Kaushal 2.0 (Life Skills Program) (Wadhvani Foundation)

Education

Bachelor of Engineering (B.E) Computer Science & Engineering, 2021 – 2025
Visvesvaraya Technological University (VTU)
CGPA: 7.54

Pre-University Course (PUC), Universal PU College 2019 – 2021
Percentage: 83.4%

High School (ICSE), Bethel International Public School 2019
Percentage: 76.67%

Projects

Multi-Region Web Hosting Using Azure, *Tech Stack: Microsoft Azure, Traffic Manager, Application Gateway, Linux*

- Designed and implemented a multi-region web hosting solution on Microsoft Azure for high availability and failover support
- Configured Azure Traffic Manager and Application Gateway for traffic routing and load distribution
- Worked on deployment, monitoring, and troubleshooting of cloud-hosted applications
- Improved application reliability and accessibility through region-based traffic management

Phishing Website Detection System using Machine Learning, *Tech Stack: Python, Machine Learning*

- Developed a phishing website detection system using machine learning techniques
- Applied data preprocessing and classification methods for identifying malicious websites
- Improved understanding of cybersecurity and predictive analysis concepts
- Performed feature extraction and model evaluation for phishing URL classification

Scalable Web Hosting and Load Balancing Project, *Tech Stack: IBM Cloud, Load Balancing, Auto Scaling, Linux*

- Implemented load balancing and auto-scaling concepts in a cloud-hosted environment.
- Worked on deployment workflows, monitoring, and infrastructure management.
- Improved application availability and scalability through resource optimization.

CI/CD Pipeline Automation Using Jenkins, *Tech Stack: Jenkins, Git, Docker, Linux*

- Designed and implemented automated CI/CD pipelines using Jenkins.
- Integrated source control repositories with automated build and deployment workflows.
- Automated application deployment processes using Docker-based environments.
- Performed troubleshooting of pipeline failures and deployment issues.
- Improved release consistency through continuous integration and automated delivery practices.

Infrastructure Automation Using Terraform, *Tech Stack: Terraform, Azure, Linux*

- Provisioned cloud infrastructure using Terraform following Infrastructure as Code principles.
- Automated deployment of networking and compute resources.
- Managed infrastructure configurations through version-controlled code.
- Improved deployment consistency and reduced manual provisioning efforts.
